## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/8/2009 has been entered.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-6, 8-21, and 44 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Although the Examiner was able to find support for a specific charging frequency of 127 kHz and a specific "booster" frequency of 1.2 MHz, the Examiner was unable to find support for larger range of frequencies, as claimed (i.e., any and all frequencies which are different from each other). This single embodiment does not appear to meet the "representative number of

species" test of MPEP 21653(II)(A)(ii) to provide written description support for the broad genus of a "second frequency different from the first frequency."

4. Claims 1-6, 8-21, and 44 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the charging frequency of 127 kHz and a "booster" frequency of 1.2 MH, does not reasonably provide enablement for any and all charging and booster frequencies which are different from each other. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims. There is no indication that any and all possible combinations of charging and booster frequencies that are different from each other would be capable of charging a battery of an implantable device or recharge a battery depleted to zero volts.
